Profile Summary

Java Backend Developer with 2 years of experience in designing and developing scalable enterprise applications using Java, Spring Boot, and Microservices. Skilled in developing RESTful APIs, integrating MongoDB, Oracle, and PostgreSQL databases, and working with Microsoft Azure and Google Cloud altform(GCP). Strong knowledge of Spring Security, multithreading, object-oriented programming, database optimization, and Agile methodologies. Passionate about building secure, high-performance backend systems and writing clean, maintainable code.

Education

K S Rangasamy College of Technology

Bachelor of Engineering (Electronics and Communication Engineering)

Namakkal, Tamil Nadu

Aug 2021 – Mar 2025

Experience

Backend Java Developer *Encipher Health*

Chennai, India

Jul 2025 – Present

- Built scalable backend services for an AI-powered healthcare platform using Java, Spring Boot, and Microservices, supporting high-volume healthcare workflows.
- Designed and implemented RESTful APIs that streamlined patient workflow management and enabled seamless AI service integration.
- Architected a multi-tenant system enabling secure data isolation across multiple healthcare organizations on a single platform.
- Integrated MongoDB, Oracle, Microsoft Azure, and Google cloud services to improve application scalability and reliability.
- Enhanced backend processing and database queries, improving application performance and scalability.
- Collaborated with cross-functional teams in Agile sprints to deliver backend features within release timelines.

Project: AI Medical Coding Platform

- Designed and implemented workflow management for AI, Coder, and Physician roles with automated task allocation.
- Built RESTful APIs for patient workflow, document processing, and AI inference integration, enabling seamless communication between backend services and AI models.
- Implemented MongoDB aggregation pipelines and optimized database queries to generate healthcare analytics and reporting.

Backend Java Developer *Mindbridges Technologies*

Chennai, India

Dec 2024 – Jun 2025

- Developed and maintained backend services for a Timesheet Management System using Java and Spring Boot.
- Planned and optimized MySQL and PostgreSQL database queries for reporting and business operations.
- Built secure RESTful APIs using Spring Security and JWT, enabling role-based authentication and authorization across 5+ user roles.
- Integrated Redis caching and WebSocket-based real-time notifications, reducing redundant database access by 35% and improving responsiveness.
- Collaborated in Agile development, contributing to sprint planning, code reviews, and API testing to ensure timely feature delivery.

Project: Timesheet Management System

- Built backend services for a Timesheet Management System, automating employee timesheet submission and approval workflows and reducing manual effort.
- Developed WebSocket-based real-time status updates, improving user experience and eliminating manual page refreshes.
- Optimized MySQL and PostgreSQL queries, improving report generation and business data retrieval performance.

Technical Skills

Languages: Java, SQL, JavaScript

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Microservices

Databases: MongoDB, PostgreSQL, Oracle, MySQL, Redis

Cloud: Microsoft Azure, Google Cloud Platform (GCP)

Tools: Git, GitHub, Maven, Postman, Swagger (OpenAPI), Docker, Linux, IntelliJ IDEA, Jenkins

Technologies: RESTful APIs, JWT Authentication, Multi-Tenant Architecture, Apache Kafka, WebSocket, API Gateway
